# weemote® X TV Remote Control

WE-XW (White)

WE-XB (Blue)

### Key Features:

- *Simple User Interface*
- *Highly Programmable for advanced AV needs*
- *Small comfortable form factor*
- *Hidden program buttons*
- *Protected Settings*
- *Strong ABS Plastic Construction*
- *Secured Battery Cover - will not break or pop-off*
- *Designed for supplemental needs - works with existing remote controls*

The weemote X TV Remote Control makes TV confusion a thing of the past for young children, seniors, disabled and the technically challenged. For those users, the weemote® X offers a simple set of buttons they can easily use. No more pressing the wrong button on your current remote, causing your system to go into frustration mode. With a single press of the power button, weemote X turns on your TV system properly and with the use of favorite channels, takes the user directly to the channels they love.

The weemote® X design represents over ten years of customer feedback providing the most programmable remote control in it's class on the market. This makes setting up and using a weemote® X work in the most basic TV setup all the way to most advanced home theater systems.

There are also numerous option settings to make your weemote X work best for the person who will be using it. For example, you can turn off the volume and mute controls, set the channel up/down to limit channel access (great for kids) and apply special controls to the weemote like the sleep timer or video input control from your existing remote controls.

The weemote X includes a simple quickstart guide and reference guide to support more advanced setups. Comes in your choice of either a high-tech glossy white or blue case.

So what makes weemote® X different from our earlier models? In a couple of words, advanced learning. Learning simply allows you to take your existing remote control/s and point them at the weemote® X to record those signals. Once recorded, you can then playback those signals using the weemote® X to operate your TV system. While earlier models provided what we called selective learning, the new weemote® X provides complete learning of all the signals you need to operate your TV system. While in most cases you can use our built in set of device codes to get your weemote® X to work with your equipment, these advanced learning features greatly expands our compatibility to handle virtually any TV or TV combo brand on the market.
